Virooshan Naidu A/L Rajkumar

AI & Software Developer

Shah Alam, Selangor | +60 12-495 3622
virooshann@gmail.com | github.com/virooshann

PROFILE

Computer Science graduate specialising in Artificial Intelligence, with a focus on building practical AI and software solutions. Experienced in computer vision, machine learning and API integration, demonstrated through a multi-camera facial recognition attendance system and a license plate recognition pipeline. Brings hands-on industry experience in IT infrastructure, networking and hardware support, and runs a registered IT services company handling both technical delivery and finances. A highly collaborative team player who enjoys leading groups, communicates confidently in English, Malay and Tamil, and manages time well across multiple responsibilities.

WORK EXPERIENCE

Netrik Techworks

Jul 2025 – Present

Founder & CFO

- Founded an SSM-registered IT services company offering PC and laptop repair, network setup, CCTV installation, server management, website development and maintenance, custom software development, and the sale of computer parts and accessories.
- Manage company finances end to end, including budgeting, pricing, quotations, invoicing, accounts and banking.
- Developed and maintain the company's internal systems: the company website, a customer ticketing system, an invoice, quotation and receipt generator, and in-house accounting software.
- Contribute directly to technical work, including coding on client software projects.

Key Achievement: Built the company's complete operational toolkit in-house, from customer tickets to invoicing and accounting, giving the business a streamlined workflow from enquiry to payment.

Solara Systems (M) Sdn Bhd

Mar 2025 – Jul 2025

Junior IT Executive

- Set up networks at 10+ client sites, configuring Cisco and TP-Link switches and routers, Sophos firewalls and VPNs to establish secure, stable connections.
- Secured VPN access and Dahua NVR/DVR surveillance systems with proper authentication controls.
- Diagnosed, repaired and upgraded 50+ laptops, replacing components including RAM, SSDs, batteries, ribbon cables, keyboards and fans.
- Performed BIOS updates, Windows upgrades, driver installations and Microsoft Office activation.
- Resolved hardware, software and connectivity issues for end users, and supported Windows and Windows Server environments.

Key Achievement: Simplified the company's standard operating procedures (SOPs) so tasks were easier and quicker for the team to follow, and was trusted with independent responsibility for client work.

IDS Medical Systems

Sep 2023 – Dec 2023

Support Intern

- Tested software applications to identify and resolve defects before release, ensuring functionality and quality.
- Assisted in building user-friendly project prototypes.
- Took part in strategic planning sessions to align projects with long-term goals.

PROJECTS

AI Classroom Attendance System View on GitHub

Final Year Project, Grade A+ · Python, OpenCV, dlib, SQLite, Tkinter

- Built a multi-camera facial recognition system: an entrance camera marks attendance and two classroom cameras track presence throughout the session.
- Chose dlib HOG over DeepFace after testing showed DeepFace ran at 1–3 FPS on CPU-only classroom hardware.
- Added anti-spoofing liveness detection that reuses face encodings, rejecting printed photos at no extra compute cost.
- Prevented duplicate session records when the camera and lecturer portal trigger simultaneously.
- Delivered admin, lecturer and student portals with live attendance monitoring and automatic Present/Late/Partial/Absent status.

Malaysian License Plate Recognition System View on GitHub

Python, image processing, EasyOCR

- Designed, built and tested a pipeline using edge detection, morphological processing and candidate scoring to locate plates.
- Improved OCR reliability by reading multiple enhanced versions of each plate and applying Malaysian plate-format correction rules.

Student Exam Score Predictor

Python, scikit-learn, XGBoost, Streamlit

- Trained and tuned four regression models with GridSearchCV and deployed them in a Streamlit web app with model selection and validated inputs.

EDUCATION

Asia Pacific University of Technology & Innovation (APU)

Expected Nov 2026

BSc (Hons) Computer Science (Artificial Intelligence) CGPA 2.78

- Relevant modules: Image Processing & Computer Vision, Big Data Analytics, Text Analytics, Enterprise Programming for Distributed Applications, Enterprise IoT.

Asia Pacific University of Technology & Innovation (APU)

Diploma in ICT (Software Engineering) CGPA 2.90

- Relevant modules: Networks and Networking, Operating Systems, Database Systems, Web Development.

SKILLS

Programming	Python, SQL, Java, C++, R
AI & Data	OpenCV, face_recognition/dlib, EasyOCR, scikit-learn, XGBoost, Streamlit, RapidMiner
Development	API integration, AI-assisted development, Git, GitHub, VS Code, Claude Code, ChatGPT
Cloud & Deployment	Google Cloud, AWS, Cloudflare, Vercel
Networking & Security	Cisco, TP-Link, Sophos firewalls, VPN configuration, switch and router setup, Dahua NVR/DVR and CCTV
Systems & Hardware	Windows, Windows Server, server management, hardware diagnosis and repair, BIOS updates
Productivity	Microsoft Office, Canva
Soft Skills	Teamwork, leadership, communication, time management, problem-solving

LEADERSHIP & INVOLVEMENTS

- **President**, Young Enterprise Club (secondary school)
- **Main Goalkeeper**, school football team
- **Main Goalkeeper**, APU futsal team
- **Group Leader** for the majority of university group assignments
- **Regular Blood Donor**, donating every three months

LANGUAGES

English (Native) · Malay (Native) · Tamil (Native)
